

12th October 2023 – 27.36R

eWH W4 78.6% retrace (of NYSE move) with an ABC FE127. Confluence: the NYSE opening price and pre-spot low.

Initial target was the opening range low for 6R. After that, the trade management kicked in, eventually closing with EMA-based SL management

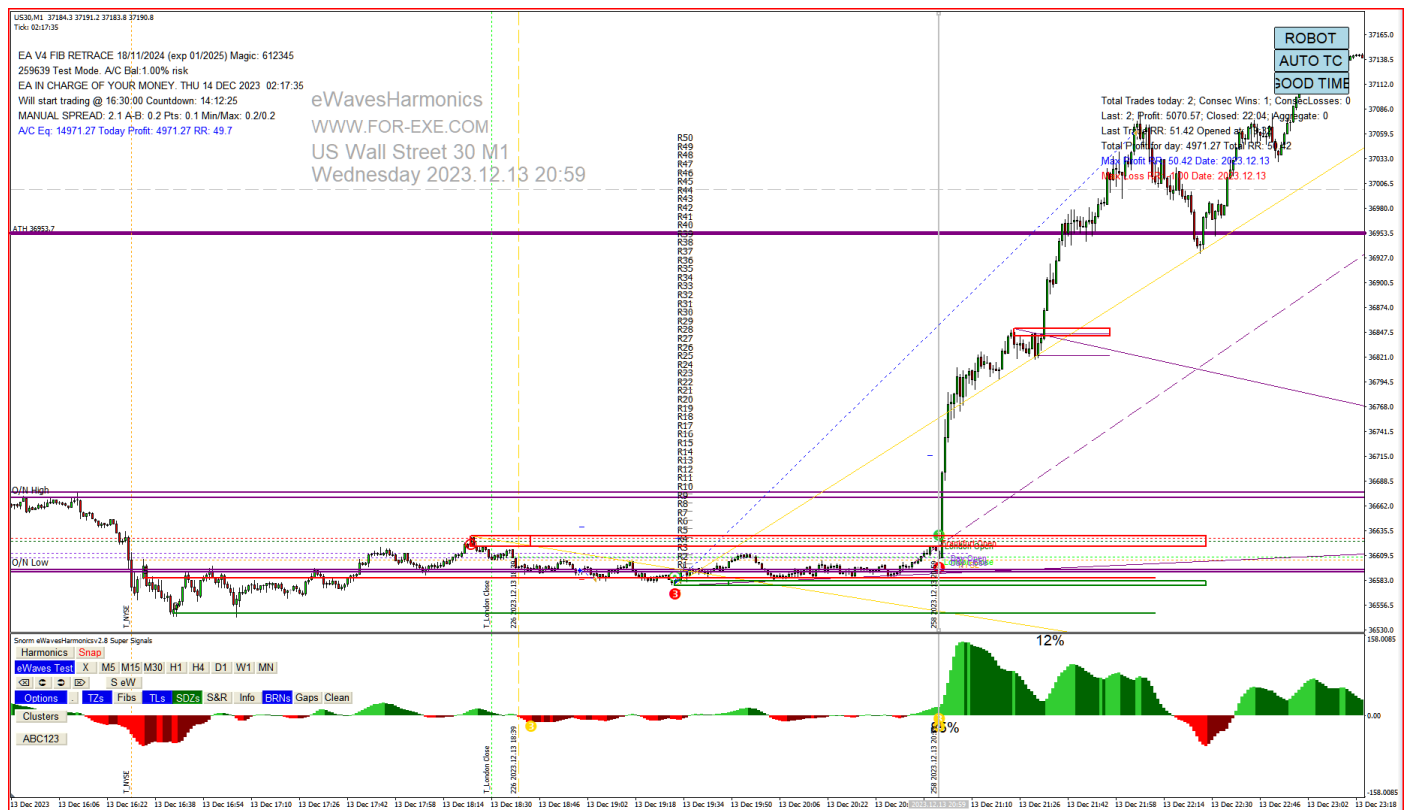

13th December 2023 – 51.42R

P5 setup with 61.8% retrace and ABC FE62 – just short of the TZ1. Confluence: NYSE opening price low.

Price took off with the FOMC announcement and only closed with the tight SL trail at the 50R level

25th January 2024 – 32.67R

Price had a strong move up from news at the New York Open (an hour before NY Stock Exchange opened). Price then took a long time to retrace back to the NYO price level for TZ1 / ABC FE62 and, essentially, a large P5.

There were quite a few losing trades, in the early part of the session, and it took a few attempts around our final entry level, but the 7th trade of the day (maximum allowed for the Bot) worked well. Trade closed with end of day trade management.

4th April 2024 – 48.83R

Strong move down from the NYSE open then a long time to retrace 62% to TZ1/ABC FE62. to give a really nice P5 entry.

Trade closed with the Bot doing tight SL management at the 50R profit level. There was another nice trade soon after the open. Just trading a simple correction of the opening move – a sort of AC.

9th October 2024 – 24.68R

The strong move down, from the open, was totally reversed – we see this quite a lot. Price then corrected to the 50% and close to the pre-open high for an SDF / TLB.

The Bot will generally aim for the Fibonacci Expansion 162 but there was plenty of profit to be made by just aiming for the FE100, then letting trade management take over – this was closed with EMA trailing management, although the FE127 level would have made for a much better target.
